If it is not a unconstitutional invasion of state powers, there never was only a way probably written to be declared unconstitutional and thus build a new free under the Supreme Bench. If Federal executive dictation can enter any Batas and, in its own unlimited discretion, so regulate practically all wages—which means coats of production and which means costs of production and hence prices—there is little left for the States to do, or for labor unions or in-dustry or consumers either. What you have is Mussolini's corporate state.
